

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A ~~portable~~ method of real-time identification and verification of the identity of a person comprising the following steps:
- providing a portable handheld device;
 - capturing an image of a fingerprint;
 - processing the fingerprint image to determine if the finger print image meets a predetermined quality level;
 - storing fingerprint images that satisfy the predetermined fingerprint quality level in temporary data storage of the portable handheld device;
 - enhancing the fingerprint image;
 - after enhancing the fingerprint image, transmitting fingerprint images that satisfy the predetermined fingerprint quality level to a central processor for processing;
 - processing the transmitted fingerprint images to determine if there is matching fingerprint information in central data storage;
 - receiving data from the central processor relating to the processed fingerprint image; and
 - displaying the data received on a display of the portable handheld device.
2. (Original) The method of claim 1, wherein the step of capturing a fingerprint image includes the steps of:
- positioning the finger on a finger receiving surface of the portable device;
 - and
 - scanning a slap imprint of the finger.
3. (Original) The method of claim 2, wherein the finger receiving surface captures fingerprint images in varying illumination conditions ranging from bright sunlight to total darkness.
4. (Original) The method of claim 1, wherein the step of capturing a fingerprint image includes the steps of:
- positioning the finger on a finger receiving surface of the portable device;

and

scanning a rolled fingerprint.

5. (Original) The method of claim 1, wherein the step of capturing a fingerprint comprises scanning a latent imprint.

6. (Original) The method of claim 1, wherein the step of capturing a fingerprint image includes the step of determining the image quality of the fingerprint captured.

7. (Original) The method of claim 1, wherein the step of transmitting fingerprint images includes the steps of:

a wireless transmission from the portable handheld device to a wireless mobile unit for processing; and

wireless transmission from the wireless mobile unit to the central processor for comparison of the fingerprint images transmitted to a plurality of previously stored images to immediately determine identity and background information on individuals being fingerprinted in the field.

8. (Original) The method of claim 1, including the step of capturing a facial image and transmitting the captured facial image to a central processor, wherein the step of transmitting the facial image to the central processor includes the steps of:

a wireless transmission from the portable handheld device to a wireless mobile unit for processing; and

wireless transmission from the wireless mobile unit to the central processor for comparison of the facial images transmitted to a plurality of previously stored facial images to immediately determine identity and background information on individuals in the field.

9. (Original) The method of claim 1 further including the steps of recording, displaying, and transmitting live video images captured, wherein the step of transmitting the live video images captured includes the steps of:

a wireless transmission of the live video images captured from the

portable handheld device to a wireless mobile unit for processing; and
wireless transmission of the live video images captured from the wireless mobile unit to the central processor for storage in central data storage.

10. (Original) The method of claim 1 further including the steps of recording, playing back, displaying, analyzing, and transmitting audio information captured, wherein the step of transmitting the audio information captured includes the steps of:

a wireless transmission of the audio information captured from the portable handheld device to a wireless mobile unit for processing; and
wireless transmission of the audio information from the wireless mobile unit to the central processor for comparison of the audio information transmitted to a plurality of previously stored voice files to immediately determine identity and background information on individuals in the field.

11. (Original) The method of claim 1 further including the step of, capturing identification data from an external source.

12. (Original) The method of claim 11 wherein the external source is an identification card having an magnetic strip bar code.

13. (Original) The method of claim 11 wherein the external source is a smart card.

14. (Original) The method of claim 1 including the step of capturing geographical position and direction data.

15. (Original) The method of claim 1 including the step of transmitting a signal for emergency assistance.

16. (Currently Amended) A portable apparatus for identification and verification of a fingerprint comprising:

a housing having an ergonomic handle formed thereon that provides for

one hand operation and command of all the functions of the apparatus;

a user interface, attached to the housing for data input, display and receipt, the user interface including at least a finger-receiving surface for receiving images of a fingerprint and buttons for data entry and command execution;

a sensor positioned within the housing and electrically connected to the user interface for capturing the fingerprint images from the finger-receiving surface;

a processor electrically connected to the sensor for processing the fingerprint images captured to determine if the fingerprint images captured meet a minimum fingerprint quality level; [[and]]

a transmitter, electrically connected to the processor for transmitting fingerprint images to a central processor for identification and verification; and

a module operating within the processor for the enhancement of the fingerprint image prior to transmittal of the fingerprint image.

17. (Currently Amended) The portable apparatus of claim 16, wherein the portable handheld device further includes a module operating within the processor that provides for the capture ~~and enhancement~~ of the fingerprint image prior to transmittal.

18. (Original) The portable apparatus of claim 16, wherein the portable handheld device further includes data storage electrically connected to the sensor for storing the fingerprint images captured that meet a minimum fingerprint quality level.

19. (Original) The portable apparatus of claim 16, including a removable baffle for preventing illumination sources to interfere with capturing the fingerprint on the finger-receiving surface.

20. (Original) The portable apparatus of claim 16 including a recorder that records and plays back audio and video information that is analyzed by the processor.

21. (Original) The portable apparatus of claim 16 wherein the user interface includes a card reader for entry of identification data from smart cards or cards having magnetic strips.

22. (Original) The portable apparatus of claim 16 wherein the user interface includes a bar code reader for entry of identification data.

23. (Original) The portable apparatus of claim 16 including a GPS receiving electrically connected to the processor to provide for the capture of geographical position and direction data.

24. (Original) The portable apparatus of claim 16 including a wireless transmitter electrically connected to a single switch and the processor for transmitting a signal for emergency assistance when the single switch is engaged.

25. (Original) The portable apparatus of claim 16 wherein the user interface includes a data entry device for entry of text or voice data.

26. (Original) The portable apparatus of claim 16 wherein the sensor may detect latent fingerprints, the portable apparatus including a latent fingerprint alignment guide.

27. (Original) The portable apparatus of claim 16 wherein the transmitter is a wireless transmitter.

28. (New) The method of claim 1, wherein enhancing the fingerprint image comprises at least one of the following steps:

- thresholding the image;
- enhancing contrast of the image;
- enhancing sharpness of the image; and
- inverting the image.

29. (New) A method of real-time identification and verification of the identity of a person comprising the following steps:

- providing a portable handheld device;
- capturing a facial image;

storing facial images in temporary data storage of the portable handheld device;

transmitting facial images to a central processor for processing;

processing the transmitted facial images to determine if there is matching facial information in central data storage;

receiving data from the central processor relating to the processed facial image; and

displaying the data received on a display of the portable handheld device.

30. (New) The method of claim 29 wherein the step of capturing a facial image may be preformed in varying illumination conditions ranging from intense illumination to total darkness.
